

Gong Jian 宫健 QA Tester & Test Automation Engineer

QA-focused engineer with 6+ years of experience at Trip.com and AfterShip, combining end-to-end testing leadership with test automation. Led testing that reached 96% coverage at AfterShip, built Python/Poco/pytest-bdd tests across languages and resolutions for a Steam release, and built frontend monitoring at Trip.com that caught 90% of client-side issues before backend log analysis.

Work Experience

Kickstart Now OÜ 2025–2026

Developed gameplay and automated localization for a Steam release; built Python/Poco/pytest-bdd tests across languages and resolutions.

Unity Localization Test Automation

AfterShip.com 2019–2021

Automated crawler mapping, eliminating manual work equivalent to 20% of sprint story points; led end-to-end testing to reach 96% coverage.

Python React Node.js AWS Google K8S

Trip.com 2015–2019

Delivered checkout, withdrawal and bank-card features; built frontend monitoring that detected 90% of client-side issues before backend log analysis.

React Native Node.js jQuery Grafana

Tallinn University Jul 2026

Taught Figma design systems at Tallinn University, guiding students through design tokens, reusable components, prototyping and developer handoff.

Figma Design Systems

Key Skills

Test automation

Python, Poco, pytest-bdd and end-to-end testing

Quality & reliability

96% coverage, frontend monitoring and payment-flow testing

Full-stack

React, Node.js, TypeScript and Astro

Automation & cloud

CI/CD, crawler workflows, Docker, K8S and AWS/GCP

Education

Tallinn University MSc 2024–2026

Digital Learning Games

Award: National Scholarship for International Students, Education and Youth Board of Estonia (2026)

Universidade Lusófona Jan 2026

Data Science Applied to Geographic Information Systems

Brandenburg University of Applied Sciences

Dec 2025

Interactive Environments

Shenyang University of Technology

BSc 2011–2015

Computer Science

Selected Work

Grandpa's Bee Haven

Developed gameplay, localization and automated tests for an award-winning Unity game released on Steam.

Award: BEST GAMEPLAY, Estonian Game Dev Guild Awards 2026

Unity · Localization

Trip.com

Built checkout, withdrawal and bank-card features, alongside frontend monitoring and tools for testing payment flows.

jQuery · React Native · Node.js

AfterShip.com

Developed courier-data workflows, crawlers and analytics interfaces for AfterShip, connecting data collection with reporting.

Google K8S · AWS · Python

Tallinn University XR Tour

Built a browser-based campus tour with captured 3D scenes and XR teleportation; tested on Quest 3.

BabylonJS · 3DGS

XR Drone Simulator

Built a Unity XR drone simulator with PID control and ML-Agents for my MSc thesis; published on SideQuest.

Unity · MRTK · PID Control

GrowGen.xyz

Built an Astro blog and project lab; reduced SVG previews from up to 1 MB to 10–100 KB.

Astro · ReactJS · Mantine

Missile Command: 3D Multip...

Built a 1v1 Babylon.js game with real-time multiplayer state synchronization through a Colyseus server.

BabylonJS · Colyseus · Node.js

Baltic Kitchen Kaos

Programmed cooking gameplay and experimental hand tracking, bridging browser-based MediaPipe to Unity through JavaScript.

Unity · ReactJS · MediaPipe

Tetris AI

Modernized Pixtris to PixiJS 8 and TypeScript, adding a minimax opponent for competitive play.

PixiJS · Minimax
